

## STRINGS

##Author - Shiuli Maji

Date - 10/01/2023

**# # a.     *Input a string and print it.***

```
tr="CENTRAL CALCUTTA POLYTECHNIC"
```

```
print(tr)
```

### **OUTPUT:**

```
PS D:\> python -u "d:\Python\STRINGS\Sprint.py"
```

```
CENTRAL CALCUTTA POLYTECHNIC
```

```
PS D:\>
```

**# b. *Input a multi-line string and print it.***

```
st2=""" i loves
```

```
python and
```

```
programming"""
```

```
print(st2)
```

### **OUTPUT:**

```
PS D:\Python> python -u "d:\Python\STRINGS\Sprint.py" i
```

```
loves
```

```
python           and
```

```
programming.
```

***# c. Print a string with \n***

```
st3=r" i loves \n python"  
print(st3)
```

**OUTPUT:**

```
PS D:\Python> python -u "d:\Python\STRINGS\Sprint.py" i  
loves \n python
```

***# e. Concatenate two strings***

```
st4="i loves programming" st5="i  
loves c" print(st4,st5) print(st4)
```

**OUTPUT:**

```
PS D:\Python> python -u "d:\Python\STRINGS\Sprint.py" i  
loves programming i loves c
```

***# f. Find the length of a string***

```
st6="i loves python" print("The  
length of string is:") print(len(st6))
```

**OUTPUT:**

```
PS D:\Python> python -u "d:\Python\STRINGS\Sprint.py"  
The length of string is:  
14
```

***# g. Get the last 3 characters from the string*** st7="i

loves python"

```
print("the last 3 characters from the string is:",end=' ')
```

```
print(st7[-3:])
```

### **OUTPUT:**

```
PS D:\Python> python -u "d:\Python\STRINGS\tempCodeRunnerFile.py"
the last 3 characters from the string is: hon
```

***# h. Print 4th to 8th position characters***

```
st8="computer science and technology"
```

```
print(st8[3:9])
```

### **OUTPUT:**

```
PS D:\Python> python -u "d:\Python\STRINGS\Sprint.py"
puter
```

***# i. Print the characters between 5th and 2nd last character***

```
st9="soumitra" print(st9[5:-1])
```

### **OUTPUT:**

```
PS D:\Python> python -u "d:\Python\STRINGS\Sprint.py"
tr
```

***# j. Print the string in reverse order***

```
st10="programming"
```

```
print("The string is:") print(st10)
print("The reverse string is :",end=' ') print(st10[::-1])
```

### **OUTPUT:**

```
PS D:\Python> python -u "d:\Python\STRINGS\Sprint.py"
```

The string is:

programming

The reverse string is : gnimmargorp

### ***# k. Delete the string***

```
st11="Central calcutta polytechnic"
```

```
print("The string is : ",end=' ')
```

```
print(st11) del(st11)
```

### **OUTPUT:**

```
PS D:\Python> python -u "d:\Python\STRINGS\Sprint.py"
```

The string is : Central calcutta polytechnic
